

A diagram of a dome structure. The dome is represented by a series of vertical lines (ribs) and a curved top. The top edge of the dome is outlined in blue, and the base of the dome is outlined in red. The interior of the dome is shaded light gray.

A diagram of a dome structure. It features a series of vertical black lines representing supports or columns. The top of the dome is outlined with a blue line, and the base of the dome is outlined with a red line. The interior of the dome is shaded light gray.

2040	14.5	14.5	14.5
2050	15.0	15.0	15.0

The diagram illustrates a step function approximation. It consists of a series of vertical rectangles of increasing height. A purple line connects the top corners of the rectangles, forming a piecewise linear approximation of a curve. A red line connects the bottom corners of the rectangles, forming a step function. The rectangles are arranged in a way that the total width of the base is constant, but the height of each rectangle increases, creating a staircase effect. The purple line is above the red line, and the area between them represents the error of the approximation.
